User-centered development guides readers through the process of designing based on the needs of the user. This text will take the reader from the initial idea of developing a site through determining the mission of the site, collecting the requirements, designing the pages, performing usability testing, and implementing and managing a site. Further, large case studies will assist readers in comprehending how these user-centered design concepts can be applied to real-world settings. The author has shown how to implement his design concepts in three case studies spread throughout the book: a non-profit, an educational site, and Eastman Kodak.
